Abstract :
A novel game and board or surface is played in combination with two sets of playing pieces consisting of three dice each, one set being visibly distinguishable from the second set and wherein in one embodiment all bets are placed on the board or surface before the first set of dice is throw to speed up the method of play and payoffs for each bet are set by the house. Optionally, the house may set and take additional bets between a throw of the first set of dice and a throw of the second set of dice. In another embodiment of the invention, players use the two sets of dice in sequence wherein winning bets are related to poker hands such as open numbers from 3-35; 3 of a kind; 4 of a kind; 5 of a kind, straight; any 3 pair; 6 of a kind, and six sixes (but specifically excluding two of a kind to provide decisive winning odds for the house) and where the payoffs for each bet are 2 for 1, 3 for 1, 4 for 1, 5 for 1, 8 for 1, 8 for 1, 12 for 1, and 20 for 1, respectively, for example. In yet another embodiment of the invention, odds for all bets are again set by the house and a defined whole or percentage of the remaining losing bets form a progressive pot for 6 of a kind and/or six sixes comprises part of the betting.
